

### Abstract

The present invention aims at providing a wide polyolefin film by high-speed film forming, which has uniform property over the whole width thereof and is free of thickness 5 irregularity, and provides a packaging film applicable to large-scale production, which has good gloss and bag-making property, as well as a package.

A polyolefin laminate film comprising an oriented base layer mainly comprising a polypropylene resin and a sealing 10 layer mainly comprising a polyolefin resin which is formed on at least one surface of the base layer, which film has an effective product takeout width of not less than 5500 mm and satisfies the following relational formula of a thickness variation rate Y (%) of the film and a product takeout width X 15 (mm) of the film:

$$Y \leq 0.001X+4$$
